Work experience

2/2019–present

Android Developer, Sanctus Media, Ltd.

Development of 6 Android applications, 2 Android libraries, 2 REST API microservices, 1 Alexa skill, and 9 side projects. Occasionally administration of Linux servers, Google Play Console, Firebase, and AWS infrastructure. 100% remote work since 2020. Daily communication with team exclusively in English.
Some of the projects I created here:

- **WattsUp** – Assistant for EV drivers which allows to find nearest rapid chargers, plan route, select charging stops along the chosen route, and also view the live status of charging stations.
  - 2019: Design and development of an Android version for the existing iOS version and graphical design of dark mode.
  - 2020: Design and development of the first and most successful paid feature to date: Discovery Mode.
  - 2022: Added dynamic logos for charger operators.
  - 2024: Implementation of advanced filtering, price calculation, and WattsUp Pro paywall dialog.
  - 2024: Added support for generic charger operators and close integration with the OCPI standard.
  - 2025: The beginning of a major redesign and transition to Mapbox 11.
  - Releasing on Google Play and providing user support.
- **Sanctuary First** – Christian spiritual community with modern approach. The app contains videos, podcasts, likes, comments, live streams, music, favorites, Bible reader, etc. Everything that you miss in a church building is here!
  - 2020–2021: Development of the initial Android version based on the graphical design.
  - 2021: Initial graphical design of the user section.
  - 2022: Database architecture design for comments and likes + graphical design of the comments section.
  - 2023: Dynamic updates of likes, comments, and the start/end of live streams using the Pusher library.
  - 2025: Major refactoring of core architecture; added Bible reader and playlists for guided meditations.
  - Releasing on Google Play, providing user support and direct consultation with the client.
- **CrossReach** – Originally, it was just an electronic version of a physical book annually released by the organization of the same name. Over time, however, interesting features were added:
  - 2024: Implementation of Google sign-in.
  - 2024: Payments via the native Stripe API.
  - 2025: Added support for deep links.
  - 2025: Notifications using Pusher Beams with dynamic Room DB updates on-demand.
  - Releasing on Google Play and providing user support.
- **Sanctus Tools** – AAR library created in response to the growing number of Android applications at Sanctus Media. It contains top-level utility functions and Kotlin extensions, which helped to speed-up development and improved quality of our apps. This library contains one-liners for quick fade-out animation, detection of overlapping Views, hiding the virtual keyboard, and many more.
- **Sanctuary First pro Amazon Alexa** – Alexa Skill, that allows user to listen to daily prayers or readings from Bible or other spiritual book. Prayers and reading are downloaded from Sanctuary First API.
  - Design and development of Alexa Skill
  - Publication on Amazon Store.

3/2017–3/2018

Support Worker, Redcroft Care Homes, Ltd.

Support and protection of adults suffering from Learning Disability, ASD and Prader-Willi Syndrome.

6/2016–1/2017

Java Developer, FCR Tech, spol. s.r.o.

Development of an application for printing yellow pages. Leading team of four Turkish internship students.

1/2014–6/2016

Java Developer, Bach systems, s.r.o.

Development of intranet web applications in Vaadin & Java. I have worked here on larger projects, such as Archive of Czech National Bank.

1/2014–6/2014

Java Developer, Exekutorský úřad Havlíčkův Brod

Development and support of the Hybrid Post application.

6/2011–1/2014

Administrator, Exekutorský úřad Havlíčkův Brod

Administration of client stations and servers, development of custom software tools according to employer's needs. Created initial version of Hybrid Post and focused on software development since then.

Education

2011–2015 **Bachelor's degree in Applied Computer Science**, *Palacký University Olomouc*

2003–2011 **Maturita**, *Gymnázium Havlíčkův Brod*

Programming languages

Kotlin	●●●●●	Java	●●●●●	Bash	●●●●○
C/C++	●●●○○	Swift	●●○○○	Common Lisp	●●○○○

Android & related technologies

Basics	Android SDK, Activity, Services, Fragments, Composable functions, Lifecycle
UI	Jetpack Compose, XML layouts, Custom Views (Canvas), Material Design
Parallelization	Kotlin Coroutines, Java Executors
Networking	OkHttp, Retrofit, REST APIs, JSON, GSON, Base64
Data	Room DB, SQLite, Shared Preferences
Security	AES, R8 / ProGuard, Secure token handling, JWT, Google Sign-In
Architecture	Lifecycle-aware components, ViewModel, Navigation Component, KMM
Notifications	Push notifications, Deep links, Pusher, Pusher Beams, Pushwoosh
Maps	Mapbox SDK
Media	ExoPlayer
Monetization	Google Play Billing library, Stripe SDK
Tooling	Gradle, Google Play Console, App Signing
Testing	Unit tests, System tests, Organizing of internal beta testing
Telemetry	Sentry, Mixpanel
Others	Graphical design, Google Play Console management, App signing & release management

Other skills and knowledge

Versioning	Git, GitLab, Github
Organization	Slack, Zoom, Github Issues, Jira, Clockify
CI/CD	Jenkins, Teamcity
Backend	Ktor, MariaDB, MySQL, PostgreSQL, Elasticsearch
Server-side	Apache, Nginx, Supervisord, TLS/SSL, Wowza Streaming Engine
Infrastructure	AWS, Hetzner, Linode, Digital Ocean
OS	GNU/Linux, Android, Mac OS, Windows
Others	HTML/CSS, SQL, LaTeX

Jazyky

Czech	Native	
English	Intermediate (~ C1)	*Fluent interaction with native speakers*

Personality

- Independence
- Honesty
- Perseverance
- Passion to learn new things

Interests

- Photography
- Artificial Intelligence
- Graphics
- Travel
